FOR IMMEDIATE RELEASE

China Telecom Satellite Communications, MEASAT and Extend Networks Sign Strategic Memorandum of Understanding

Bangkok, Thailand – 28 October 2026 – During the "China Telecom Smart Global & AI Innovation Conference" held in Bangkok, Thailand, China Telecom Satellite Communications, Malaysian satellite operator MEASAT, and Extend Networks officially signed a strategic memorandum of understanding. Present at the signing ceremony were Zhang Xin, General Manager of China Telecom Satellite Communications; Yau Chyong Lim, Chief Operating Officer of MEASAT; and Daniel Kwan, President of Extend Networks.

Under this agreement, the three parties have formally established a strategic partnership. Leveraging the Tiantong-1 satellite mobile communication system, they will jointly promote the deployment of Tiantong satellite services in Malaysia. The services will be applied across various scenarios, including emergency disaster rescue, communication coverage bridging in remote areas, and marine fisheries operations, empowering regional digital infrastructure and disaster prevention and reduction systems with stable, reliable satellite connectivity.

About China Telecom Satellite Communications

China Telecom Satellite Communications is a specialized technology-driven subsidiary established by China Telecom in the satellite communications sector, serving as the construction and operational entity for the Tiantong-1 satellite mobile communication system. The Tiantong-1 system provides stable and reliable mobile communication services in areas where terrestrial public networks are interrupted or lack cellular coverage. It is widely utilized in terrestrial emergency disaster relief, maritime shipping, scientific field expeditions, and remote area protection, delivering all-weather, wide-coverage, and damage-resistant communication security capabilities.

About MEASAT

MEASAT is a leading Malaysian satellite operator with over thirty years of deep cultivation in the Asia-Pacific satellite market. Equipped with mature satellite operations, local distribution channels, government and enterprise services, and disaster communication protection experience, MEASAT has long been dedicated to bridging the communication gaps in remote areas of Malaysia, providing reliable satellite communication services to local governments and populations.

About Extend Networks

Extend Networks delivers customized, end-to-end communication solutions for public, private, and nonprofit organizations across diverse industries. With a mission to positively impact organizations in challenging environments, Extend Networks empowers clients to improve operations, address critical challenges, and deliver essential community services. Their user-friendly, cost-effective solutions are designed for easy integration with existing infrastructure, seamlessly bridging traditional GEO satellites, high-throughput GEO, and LEO constellations to extend and enhance connectivity.
